- Automatic
- Chronometer
- Time zone function
- Second time zone
- Sapphire crystal
- Anti-reflective treatment on both sides
- Sapphire crystal case back
- Screw-in crown
- Water-Resistant to a relative pressure of 15 bar (150 metres/500 feet)

## WATCH FUNCTIONS

The crown has 3 positions:

**1. Normal position (wearing position):** when the crown is positioned against the case, the crown ensures that the watch is water-resistant.

**Occasional winding:** if the watch has not been worn for 60 hours or more, wind it up with the crown in position 1.

**2. Setting the time zone and correcting the date:** pull the crown out to position 2. Turn the crown forwards or backwards, and only the hour hand will move forwards or backwards by 1-hour intervals. By passing the hour hand over midnight, the date can be changed forwards or backwards. Push the crown back to position 1.

### Synchronisation of the hour hand and the '24-hour' hand

Pull the crown out to position 2 and turn it to synchronise the hour hand with the time indicated by the '24-hour' hand on the 24-hour scale in the centre of the dial. Make sure you set the hour hand in the correct half of the day!

After synchronising the hour hand with the '24-hour' hand, you must set the local time on your watch. Push the crown back to position 1.

**3. Time setting:** 24 hours – hours – minutes – seconds. Pull the crown out to position 3. The seconds hand will stop. Turn the crown forwards or backwards. Synchronise the seconds by pushing the crown back to position 1 to coincide with a given time signal.

## SECOND TIME ZONE

Thanks to the '24-hour' hand with its triangular point, travellers can read the time back home at a glance on the 24-hour scale at the centre of the dial.

Timing to 1/8 of a second for up to 12 hours.
