

SPEEDMASTER

MOONWATCH OMEGA CO-AXIAL CHRONOGRAPH 44.25 MM

Platinum on leather strap

Caliber
9301

311.93.44.51.01.002

-  Co-Axial escapement
-  Si14 silicon balance spring
-  Automatic
-  Chronometer
-  Time zone function
-  Tachymeter
-  Sapphire crystal
-  Anti-reflective treatment on both sides
-  Sapphire crystal case back
-  Platinum 950‰
-  4-year International Warranty
-  Water-Resistant to a relative pressure of 10 bar (100 metres/330 feet)

WATCH FUNCTIONS

The crown has 3 positions:

1. Normal position (wearing position): when the crown is positioned against the case, the crown ensures that the watch is water-resistant.

Occasional winding: if the watch has not been worn for 60 hours or more, wind it up with the crown in position 1.

2. Setting the time zone and correcting the date: pull the crown out to position 2. Turn the crown forwards or backwards, and the hour hand will move forwards or backwards by 1-hour intervals. By passing the hour hand over midnight, the date can be changed forwards or backwards. Push the crown back to position 1.

NB: when changing the time zone backwards, it is necessary to move the hour hand back past 7 pm to ensure the date changes.

3. Time setting: hours – minutes – seconds. Pull the crown out to position 3. The seconds hand will stop. Turn the crown forwards or backwards. Synchronise the seconds by pushing the crown back to position 1 to coincide with a given time signal.

CHRONOGRAPH FUNCTIONS

• **Pusher A:** start – stop, start – stop, etc
Timing to 1/8 of a second for up to 12 hours.

• **Pusher B:** reset (after a stop).

TACHYMETRIC SCALES

The desired information is read between the central seconds hand of the chronograph and the corresponding scale, over a maximum duration of 60 seconds.

Example: calculating the speed of a car.

Record the time the car takes to cover a distance of 1 kilometre. Read off the tachymetric scale the speed indicated by the central seconds hand. In this case, the car is travelling at 120 km/h.
