SPEEDMASTER
MOONWATCH OMEGA CO-AXIAL CHRONOGRAPH 44.25 MM
Titanium on leather strap
311.93.44.51.03.001
(-1) Co-Axial escapement
Ti) Titanium
(sin) Si14 silicon balance spring
(@) Automatic
cosc Chronometer
$\pm$ Time zone function
Incery Tachymeter
(s) Sapphire crystal
(ब) Anti-reflective treatment on both sides
(6) Sapphire crystal case back

Water-Resistant to a relative pressure of 10 bar (100 metres/330 feet)

## WATCH FUNCTIONS

The crown has 3 positions:

1. Normal position (wearing position): when the crown is positioned against the case, the crown ensures that the watch is water-resistant.

Occasional winding: if the watch has not been worn for 60 hours or more, wind it up with the crown in position 1.
2. Setting the time zone and correcting the date: pull the crown out to position 2. Turn the crown forwards or backwards, and the hour hand will move forwards or backwards by 1-hour intervals. By passing the hour hand over midnight, the date can be changed forwards or backwards. Push the crown back to position 1.

NB: when changing the time zone backwards, it is necessary to move the hour hand back past 7 pm to ensure the date changes.
3. Time setting: hours - minutes - seconds. Pull the crown out to position 3. The seconds hand will stop. Turn the crown forwards or backwards. Synchronise the seconds by pushing the crown back to position 1 to coincide with a given time signal.

Timing to $1 / 8$ of a second for up to 12 hours.

## TACHYMETRIC SCALES

The desired information is read between the central seconds hand of the chronograph and the corresponding scale, over a maximum duration of 60 seconds.

Example: calculating the speed of a car.
Record the time the car takes to cover a distance of 1 kilometre. Read off the tachymetric scale the speed indicated by the central seconds hand. In this case, the car is travelling at $120 \mathrm{~km} / \mathrm{h}$.

## FOLDOVER CLASPS

Using the fine length adjuster (fig. 5)

## Using the diving extension (fig. 6)

Note: to fold the diving extension away, it is important to proceed according to fig. 6.2 (with the diving extension perpendicular to the cover of the clasp).
